Cylinder Series

Our cylinder range covers compact, mini, standard, ISO profile, and rod-type cylinders for clamping, pushing, positioning, lifting, and transfer tasks in industrial automation.

Series Comparison

Series

Positioning

Key Advantage

Typical Bore Range

SDA Series

Compact cylinder

Short overall length for limited space

12 to 100 mm

MA Series

Mini stainless cylinder

Round body and corrosion resistance

16 to 40 mm

MAL Series

Mini aluminum cylinder

Lightweight body and fast response

16 to 40 mm

SC Series

Standard cylinder

Broad bore and stroke options

32 to 200 mm

DNC Series

ISO profile cylinder

Interchangeable mounting dimensions

32 to 125 mm

Rod Cylinder

General rod actuator

Flexible custom stroke and mounting

20 to 100 mm

Supply Support

Model selection support for bore size, stroke, thread type, voltage, or mounting accessories.

OEM, wholesale, and export packaging support.

Fast quotation response for standard and customized demand.

[Contact Us](#)

[FAQ](#)

How do I choose the right cylinder bore and stroke?

Selection usually depends on required force, working pressure, installation space, and travel distance. If you share your application, we can help recommend a suitable model.

Can you support non-standard stroke or mounting?

Yes. Many pneumatic cylinder projects need custom stroke, mounting accessories, or magnet options. We can confirm availability based on your model and quantity.

What information should I send before asking for a quote?

Please send the series, bore size, stroke, mounting type, quantity, and application. Photos or drawings can help us confirm the correct model faster.
